We would like to inform you about the introduction of alternative standard grease.

An alternative to the existing standard grease F15 SHELL ALVANIA 1029 is being introduced: F26 FUCHS RENOLIT AR.

The introduction of this alternative standard grease FUCHS RENOLIT AR is done for the benefit of having a second supplier and to improve reliability of supply for the AUMA Group.

FUCHS RENOLIT AR grease has a green color. This is the only major difference to SHELL ALVANIA 1029 grease which is red.

FUCHS RENOLIT AR grease has been specifically developed for our products. Comprehensive type tests have been performed with this grease to ensure optimum performance in combination with AUMA products.

Both standard greases, SHELL ALVANIA 1029 and FUCHS RENOLIT AR, can be mixed with each other without any restrictions.

In a first step, change over to the alternative standard grease will be performed in Q3 2016 for part-turn actuators of SQ type ranges only.

Special greases are not affected by this change.

MSDS data sheets are available upon request.

Should you have any questions, please do not hesitate to contact your Regional Sales Manager or Inside Sales Contact.
