AUMA actuators for extremely low temperatures

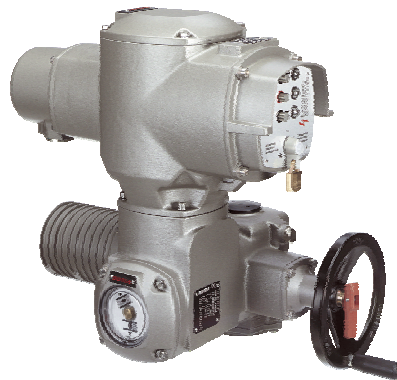

AUMA actuators are suitable for installation in **extremely cold** environments.

SA multi-turn actuators without integral controls (SA NORM version) have been available for many years in an **extremely low temperature version** down to ambient temperatures of – 50 °C (-58°F) or – 60 °C (-76°F).

Actuators with **AUMA Matic** integral controls are now available in three versions:

- Low temperature (-40°C / -40°F)
- Extreme low temperature (-50°C / -58°F)
- Extreme low temperature (-60°C / -76°F)

The low temperature functionality is achieved by an **integral heating system** within the controls.
