AUMA SG part-turn actuator available in non-intrusive version

The well-proven AUMA SG05.1 through SG12.1 range of part-turn or quarterturn actuators is now available in a non-intrusive version. The non-intrusive capability allows the actuator parameters to be set without gaining access to the interior of the actuator.

Simply manipulating the pushbuttons and selector switch at the local control panel can configure AUMA non-intrusive actuators. An LCD read-out in clear English text assists the set-up.

Non-intrusive actuators are available from AUMA in multi-turn, part-turn and linear versions.
