Western Pennsylvania Water Pollution Control Association Visits AUMA

The Western Pennsylvania Water Pollution Control Association (WPWPCA) held their March meeting at AUMA's facility in Canonsburg. The Association is a group of end users, consultants and suppliers serving the wastewater treatment industry. The goal of the WPWPCA is the advancement of knowledge in the design, construction, operation, maintenance and management of municipal and industrial wastewater treatment works. The visit consisted of a general presentation on electric actuators, how to look after actuators in service and a tour of the plant where actuators are manufactured.

Most sewage treatment plants rely on electric actuators to operate valves. The meeting presented an excellent opportunity for plant owners and designers to learn about actuators and see how they are manufactured.

AUMA manufactures a complete range of electric actuators for all types of valves in all applications. The sewage treatment industry is one of AUMA's primary end user markets.

Over 80 members of the WPWPCA attended the meeting and tour of the AUMA facility

The tour gave members a chance to see actuators being manufactured
